

## **Part F Understanding Inheritance**

**Question 5: Which class is the parent class**

**Answer:** Person

**Question 6: Which class is the child class?**

**Answer:** Student

**Question 7: Which keyword creates the inheritance relationship?**

**Answer:** extends

**Question 8: The introduce() method was written inside which class?**

**Answer:** Person

**Question 9: Can the \$student1 object call introduce()?**

**Answer:** Yes.

**Question 10: Why can \$student1 use introduce() even though it is not written inside the Student class?**

**Answer:** Because Student inherits from Person.
